PROFI PRODUCTS

Innovative in-house developed products and patented applications prove their qualities nearly worldwide and are listed as trade products at many important specialists in the power sports industry. Profi Products cooperates as supplier with several specific distributors since almost two decades!

Since 1991 product efficiency and easy handling are appreciated especially by professional users. Further characteristics, such as savings of resources, reduction of cost for maintenance, operation and cleaning and earth friendliness have added to the internationally positive reputation of the company.

The name Profi Products – **professional products for professional users** – stands for the entire range. Also for future innovations and new ideas highest priority is given to product efficiency and usefulness! Learn more about the actual product range in the following short description:

PDL® PROFI DRY LUBE

Double the life of your chain kit!

- Preserve resources.
- Reduce operation- and maintenance cost!
- Aggressive and harmful cleaning products are obsolete!

PROFI DRY LUBE is the unique dry chain lubrication, developed specifically for the maintenance of modern seal ring chains (O-, X-, Quad-, W-, Z-ring chains). PDL® is not sticky, it does not bind dirt and **chain, rim and rear wheel always stay clean.**

The active components of Profi Dry Lube reach directly underneath the outer rollers of the chain when spraying, exactly at the spots where a seal ring chain needs to be lubricated. During application only a few grams of Profi Dry Lube are needed. Since PDL® is so efficient, **it replaces approx. 2 cans of technically antiquated and equally priced greasy, adhesive lubricant!**

Several years of serious development and thousands of -on the road- test kilometers created a product which convinces motorcyclists since 1995. Also riders of mountain- and recumbent bikes enjoy PDL®.

PROFI FUEL MAX

Profi Fuel Max solves starting problems and irregular motor function in almost any case after a few kilometers. Profi Fuel Max binds and removes condensed water of the fuel system while riding.

Longer storage periods are most frequently the reason for deposits and oxidation in carburetors and fuel injection systems. The consequences are a hesitant throttle acceptance and an irregular motor function. Correct adjustment and synchronization become impossible.

After its presentation in 1997, Profi Fuel Max has convinced thousands of motorcycle workshop owners as their "problem solver nr.1". In almost any case time consuming disassembling and cleaning of carburetors, tank or parts of the fuel system become obsolete!

PROFI LASER TOOLS Chassis alignment checks without disassembling parts!

Since several years our patented measuring systems are in use daily almost worldwide! The unbeatably fast handling of the extremely precise and durable devices convince every specialist in our industry. **Know How in production and application!** Profi Products produces in Germany. The LINE LASER measuring units produce well visible light lines on both sides of the vehicle which are parallel to the vehicle's center line. In opposite to dot laser systems geometrical facts of the chassis are visualized in a few seconds.

PROFI CAT (Chain Alignment Tools)

The chain alignment testers enable a mechanic for a fast and precise performance, regardless if he is in a specialized workshop, at a race track or in his garage at home. The exactly adjusted alignment of the chain also guarantees a perfectly positioned rear wheel axle for best possible performance, more safety and more fun.

S-BAT / P-BAT (Bike Alignment Tools)

Complete systems for the professional use in workshops. When issuing cost estimates the test certificate allows a clear description of facts and a smooth handling with insurance companies. When used as a service or repair tool, measuring results visualize all chassis relevant facts in just a few minutes. Consequently designed for your needs and for the use in our industry, the systems are especially helpful because of their fast and efficient application. Their small tolerances allow documentable and reproducible measuring values. P-BAT is mainly used by custombike builders. Here most important is the significant time saving during the performance.

SE-BAT (Scooter & Enthusiast - Bike Alignment Tool)

Precision meets efficiency!

Our latest development, the SE-BAT (Scooter & Enthusiast - Bike Alignment Tool) is available now. In only one minute and without time consuming disassembly of scooter's fairing parts the actual condition of the chassis is checked.

The test certificate allows a clear exposition of the geometrical facts. Since the measuring gauges are designed for rims from 10" to 17", the tool applies also to standard motorcycles.

Therefore SE-BAT is a brilliant aid for private use, for racing teams or for restoration works.

P-QAT (Quad / ATV Alignment Tool)

Our specifically for Quad and ATV applications developed system offers the fastest and most economic solution to precisely adjust toe-in/toe-out and camber of vehicles in this category. Brand manufacturers like Honda-UK, Yamaha-DE, Kawasaki-DE or Polaris-DE use our P-QAT for training purposes and recommend it to their concessionaires as a service tool. Only best possible performance guarantees more safety, more fun and customer satisfaction.

Luster Lace® Produkte (Warehouse Europe: ProfiProducts)

A perfect **shine in record time**. The secret is the **polish in the cloth** – you do not need any additional creams or pastes. Luster Lace polishing strips - for use on circular parts - have been woven so that they cannot twist while you are polishing the part. Luster Pad – for use on flat

surfaces – is also ready to use and is made from the finest sanitised cotton. The products in our Luster Care range are extremely efficient and are ideally suited for use on all blank metal surfaces.

The “Show Quality Shine“ is very well known in the custom-bike scene. Based on the same philosophy additional specialties like Luster Seal, Luster Chrome and Luster Detailer were created to work on finest surfaces like gold plated, colored or anodized parts.

BATTERY TENDER® (Warehouse Europe: Profi Products)

America’s Nr.1 in the power sports industry. Many versions of modern batteries are designed to meet specific vehicle requirements. "Reserve capacity" is very limited and additionally parts require a permanent power supply.

This is the reason why BATTERY TENDER® chargers and maintainers never switch off, like most of our competitors products. Your battery will be recharged, monitored and is ready to start your vehicle at any time.

BATTERY TENDER® has worked together with the technical departments of virtually all the lead battery manufacturers in the world for many years in order to create this trend setting, technological advance. This exchange of information has ensured that every type of lead acid battery is controlled by the relevant and correct charging logic immediately after it has been connected.

Crocodile-clips and set of cables with ring terminals for permanent mount are included in all of our BATTERY TENDER® packages. Flat-fuses have been integrated in all standard and accessory power cables as an additional safety feature.

Quotation of Profi Products’ proprietor Reiner Bayer:

“... the high efficiency for the user of the product has always priority. This philosophy applies to our research and development work as well as to our entire range of products. Therefore the number of returning customers is growing continuously and business partnerships for many years develop”.
