

# Product data: Profi Fuel - Max

Start problems, poor throttle response and noncircular engine operation are the usual problems after a long immobilization time.

With Profi Fuel Max these problems are quickly and easily solved and the entire fuel system is cleaned.

The effect is already visible after the first 10 to 15 driven kilometers.

Profi Fuel Max is added to the fuel in the spring or even preventive (before the winter).

The product is suitable for vehicles (motorcycles, convertibles, vintage cars), which are used seasonally.

Article description: **Profi Fuel-Max - motor fuel system- & carburettor- cleaner -**
