CHAIN ALIGNMENT TOOL

PROFI LASER TOOLS

Profi Laser Tools have been developed to let mechanics and technicians perform alignment-checks of motorcycle and Quad/ATV - chassis extremely fast and precise. In just a few minutes the user disposes of exact measuring results to evaluate the condition of the most important components of the vehicles chassis. The results can be documented and used for damage diagnosis, repairs, safety-checks, performance upgrades or as a service to check second-hand vehicles.

Profi Laser Tools are developed, patented and “Made in Germany” by Profi Products. Proudly we can say that users all over the world rely on their precision, their solid construction and their easy handling. Profi Laser Tools prove their qualities every day at vehicle manufacturers, in dealers workshops, along racetracks, among estimators of insurances or in enthusiasts garages.

Profi Laser CAT – Chain/belt Alignment Tool

This smart and handy tool has been developed to adjust the alignment of chain, sprockets and rear wheel 100% correct. Precise measuring results are available in a few seconds independent of marks on the swing arm.

Short description:

Profi Laser CAT visualizes the real running direction of the rear sprocket directly on the chain links. Now sprocket and wheel axle can be adjusted absolutely precise. Also the rear wheel is now in its proper position for best possible performance.

Profi Laser CAT applies to all motorcycles with chain- or belt-drive. Maximum tolerance: $>0,05\%$.

Available versions:

D-CAT with dot laser

L-CAT with line laser technology (see picture)
